

Tableau Visualizations Assignment

This assignment analyzes retail data using Tableau to generate insights on sales, profit, trends, and regional performance.

Task 1: Category Performance Analysis

A bar chart is used to compare total sales by category. The category with the highest bar represents the top-performing category.

Task 2: Sales Trend Analysis

A line chart is used to analyze monthly sales trends. It helps identify peak and slow periods over time.

Task 3: Regional Contribution Analysis

A bar chart or pie chart is used to show region-wise contribution. The region with the highest sales contributes the most.

Task 4: Profitability Investigation

A scatter plot is used to analyze the relationship between sales and profit. It helps identify loss-making or low-profit orders.

Task 5: Business Growth Evaluation

A cumulative line chart is used to track total sales growth over time and evaluate overall business performance.

Task 6: Category vs Region Performance

A stacked bar chart is used to compare category-wise sales across different regions.

Task 7: Product Prioritization

A multi-dimensional chart (scatter plot) is used with Sales, Profit, and Quantity to identify high-impact products.

Task 8: Executive Dashboard

A dashboard is created by combining multiple charts such as bar chart, line chart, and map. Filters like Region and Category are applied for interactivity.

Q9: Chart Selection Justification

Different charts are used based on data type. Bar charts compare categories, line charts show trends, scatter plots show relationships, and maps show geographical data.

Q10: Business Insight Summary

1. Technology category generates high sales and profit, so focus should be on promoting it further.
2. Some regions show lower performance, indicating a need for better marketing strategies.
